T00 / CLASSROOM STUDIO

Evidence to Action

Solve problems with AI.
Keep your judgment.

FOR	CORE	BEFORE
Grades 6-8	**4 x 45 minutes**	**8-minute baseline**

01 / THINK

Your own view first.

02 / BRIEF

Direct useful help.

03 / REPORT

Record the contribution.

04 / CHECK

Investigate independently.

05 / ITERATE

Return with better inputs.

06 / OWN

Defend your decision.

PREPARED EXCHANGES / OPTIONAL TEACHER DEMO

THE CLASSROOM CHALLENGE

Make a recommendation about a fictional school garden. Use prepared AI replies, inspect the original records, question the advice and explain your final decision.

T01 / CLASSROOM STUDIO

One problem.
A decision students can defend.

The deliverable is a recommendation and the reasoning behind it.

PROBLEM TO SOLVE

The Campus wants to conserve water while keeping its garden healthy. Should it adopt a proposed AI watering system, run a limited test, choose a simpler option or wait? No purchase must be made today.

Student output	Evidence to retain
A one-page recommendation	The action, supporting records, limits, a next check and a responsible role.
An AI contribution report	What the prepared AI reply added, missed or overstated; what the learner accepted, changed or rejected.
An iteration trail	The first view, independent check, revised brief and reason for a meaningful final edit.

The route chosen for this edition

Prepared exchanges are the core. A teacher demonstration is optional, uses only approved tools and fictional inputs, and adds no student account requirement. The learner may justify using a person, another tool or no AI.

WHAT EARNS RECOGNITION

The source connection, quality of questioning and explanation of the decision. AI use, fluent wording, confidence and the number of exchanges earn no extra credit.

T02 / CLASSROOM STUDIO

Keep the human in the decision loop.

Checking happens throughout; return to the step that addresses the gap.

Step	Student action
01 / Think first	Define the problem, purpose, audience and success criteria. Preserve an initial idea before AI help.
02 / Brief the help	State your own view, permitted sources, constraints, format and the kind of help you need.
03 / Report the contribution	Quote or accurately summarise what AI added. Separate its suggestions from your own reasoning.
04 / Question and investigate	Challenge assumptions, check original sources, calculate and consider people affected.
05 / Iterate with evidence	Bring a new finding back into a sharper brief. Inspect the prepared revision and recheck it.
06 / Decide and own	Accept, edit or reject suggestions. Explain the final work, remaining uncertainty and human responsibility.

A USEFUL STOPPING RULE

Finish when the recommendation meets the brief, key claims are supported or qualified, and the learner can explain the choices. An unresolved issue may require human review or a pause. Endless polishing is not the goal.

T03 / CLASSROOM STUDIO

Build one recommendation. Then solve a new case.

Four 45-minute sessions, plus an approximately eight-minute diagnostic baseline.

Session	Focus and pages	Output
1 / Frame	S01-S04: task, first view, garden evidence and AI brief.	A human starting point and a bounded request for help.
2 / Audit	S05-S07 plus S03: prepared replies, contribution report and independent check.	A claim-by-claim record of what AI got right, wrong or left unknown.
3 / Iterate	S08-S11 plus S03/S05: stakeholder needs, revised brief, prepared revision and final recommendation.	An evidence-driven iteration and a final decision with ownership.
4 / Transfer	S12-S14: a new library problem; first response before feedback, then supported revision.	A separate independent attempt and an explanation of what changed.

Print and release deliberately

S00 precedes substantive teaching. Keep the garden records for sessions 2 and 3. Release S05 only after the first brief, S10 only after the revised brief, and S14 only after preserving the independent S13 response.

TIME IS A TEACHING PLAN, NOT A PERFORMANCE TARGET

Use short notes where sufficient. Accept oral or scribed explanations and extra paper. Do not add every teacher example or the live demonstration to an already full period. Record any change to time, support or route.

T04 / CLASSROOM STUDIO

Support independence without withholding access.

Read the teacher pages first. Keep model answers separate from student materials.

Before class	During the exercise
Confirm school approval, accommodations and screen/device rules. Paper is a complete route.	Ask for a first idea before showing the prepared reply. Make students point to a specific source detail.
Print selected pages and plan pairs or groups of three. Rotate reader, checker and reporter.	Distinguish what was observed, what is proposed, what people value and what remains unknown.
Keep baseline work and identified responses within the school.	Read aloud, enlarge print, allow drawing or scribing and keep agreed supports comparable.

Prepared means prepared

The supplied replies are fixed authored examples. They were not generated from the student's wording. A written brief practises directing help; comparing it with a supplied reply practises evaluating help.

PROTECT THINKING AND PRIVACY

Do not score spelling, speed, handwriting, confidence or personal beliefs. Do not require private disclosures. No student names, photos or work need to leave the classroom. Keep access support distinct from substantive hints.

T05 / CLASSROOM STUDIO

Start with a human view. Then ask for useful help.

S01-S04 / 45 minutes

Minutes	Teacher move	Student task
0-5	Introduce	Read S01. Name the decision; students preserve a first view on S02.
5-13	Investigate	Release S03. Read the records; ask what was measured, for how long and under which conditions.
13-25	Frame	Students define success, an unknown and at least two possible actions.
25-37	Brief	Complete S04: goal, permitted sources, constraints and kind of help. No reply yet.
37-45	Explain	Share why the chosen help fits the task. Preserve the brief before session 2.

TEACHER KEY / RELEASE AFTER REASONS

The watering log supports a small observed comparison. It does not establish plant health, universal savings or a verified price. Let students find the limits before modelling them.

Coach the reasoning

What do you already think, and what would you need help with rather than hand over?

T06 / CLASSROOM STUDIO

AI can contribute. It cannot verify itself.

S05-S07 plus S03 / 45 minutes

Minutes	Teacher move	Student task
0-5	Recall	Revisit the student brief and success criteria before showing a reply.
5-13	Inspect	Release S05. Compare prepared replies A/B and the source inventory.
13-25	Report	Complete S06: quote a useful contribution, a concern and a question.
25-37	Check	Complete S07 against S03 and the inventory; calculate if useful.
37-45	Decide	Record which claim to keep, qualify, remove or leave unresolved, with a reason.

TEACHER KEY / RELEASE AFTER REASONS

Reply B narrows the two-day result but adds an unsupported 30-credit price. Unknown is not zero. Reply A generalises beyond the records. A second AI reply does not supply independent confirmation.

Coach the reasoning

What exactly did AI say, what did you check, and what changed because of that check?

T07 / CLASSROOM STUDIO

Bring better evidence back. Make the final choice yourself.

S08-S11 plus the garden records / 45 minutes

Minutes	Teacher move	Student task
0-5	Prioritise	Name the most consequential gap found in session 2.
5-13	Investigate	Read S08. Identify needs involving access, permission, cost and human responsibility.
13-25	Rebrief	Write S09 before releasing S10. Inspect the prepared revision against the new requirements.
25-37	Create	Complete S11: final recommendation, AI contribution and the learner's consequential edit.
37-45	Defend	A partner challenges one claim or condition. The learner revises or explains why it stands.

TEACHER KEY / RELEASE AFTER REASONS

S10 is a prepared revision based on the supplied findings, not a response to each student's brief. It improves the source boundary, but the class must still judge the action, feasible safeguards and unresolved questions.

Coach the reasoning

Which new finding changed your instruction, and which part of the final decision remains yours?

T08 / CLASSROOM STUDIO

Use the routine again. Keep first work separate.

S12-S14 / 45 minutes

Minutes	Teacher move	Student task
0-5	Frame	Introduce the new library problem without diagnosing its measurement error.
5-13	Inspect	Release S12. Read independently with agreed access support.
13-25	Apply	Complete S13 before substantive hints or feedback; preserve the response.
25-37	Challenge	Only now compare the first reasoning and discuss a source check.
37-45	Revise	Release S14. Explain a revision or a justified recheck and any support used.

TEACHER KEY / RELEASE AFTER REASONS

Teacher key, after S13: pages read and comprehension differ. Groups, materials and noise differ. Unnamed websites add no traceable support. A feasible next check should address the claimed outcome and access needs.

Coach the reasoning

After preserving the first response: what did the source measure, and what did the claim promise?

T09 / CLASSROOM STUDIO

Separate contribution from confirmation.

Use only after students have completed their own check.

AI statement	Independent check	Decision
10 rather than 20 litres	The groundskeeper's log records that comparison for two similar beds over two days.	Keep with the conditions; do not extend to every garden.
50% less water	(20 - 10) / 20 = 0.5 for the recorded use. Plant health was not measured.	Qualify: lower use in the comparison does not prove a successful system.
The system costs 30 credits	The source inventory says none of the supplied records gives a price.	Remove the price; request a verified cost before a purchase decision.
Run a longer comparison	This is a proposed next action, not an observed result.	Judge feasibility, permission, measures and access; name a responsible role.

A useful question is answerable

Prefer "Which record establishes the price?" to "Are you sure?" Prefer "What would we need to measure?" to asking for more confident language.

THREE POSSIBLE JUDGMENTS

Useful and supported; useful but needs checking; unsupported or unsuitable for this task. A reply can contain all three. Do not reject a valid observation merely because another sentence is wrong.

T10 / CLASSROOM STUDIO

An iteration needs a reason to change.

A new prompt is not evidence of improvement. Inspect the new output.

FIRST BRIEF / PREPARED EXAMPLE

Use the garden records to organise a recommendation. Separate observations, limits and next steps; identify unknown facts.

What the independent check adds

The log is limited to two days; no source verifies a price. Stakeholders require permission, access, a simpler comparison and a person responsible. Those findings become requirements in the next brief.

REVISED BRIEF / PREPARED EXAMPLE

Keep the two-day observation and remove the unverified price. Compare a supervised trial, a simpler timer and waiting. Label proposals as proposals. Identify approvals, access needs and the decisions a person must make.

What improved	What remains a human decision
Source limits are explicit; the missing price stays unknown. Options and safeguards are more visible.	Whether a trial is justified; who may approve it; which outcomes and stop conditions matter.
The learner can identify why a requirement changed.	Whether to accept the suggestion, edit it, choose a simpler option or pause.

DO NOT FORCE AN EXTRA EXCHANGE

If the recommendation already meets the criteria and the student can defend it, stop. If a relevant gap remains, return with a specific finding or seek human review.

T11 / CLASSROOM STUDIO

Review the thinking trail, not just the final paragraph.

Use descriptive feedback. There is no automatic score or credit for AI use.

Dimension	Look for	Useful next question
Framing	A first view, a clear purpose and criteria for a good decision.	What was your own starting point?
Checking	An exact source detail or independent calculation connected to a claim.	What did you establish for yourself?
Iteration	A changed instruction or edit linked to a finding, rather than polishing alone.	What changed, and why did it matter?
Ownership	A justified tool choice, remaining uncertainty and human responsibility.	Which part of the decision is yours to defend?

Describe the next move

Use "not yet visible", "visible with a prompt" or "explained with evidence" and point to the student's work. Coach one gap, let the learner revise, and recheck that gap. A justified retained answer is acceptable.

KEEP INTERPRETATION HONEST

The short baseline does not elicit every process dimension. Do not calculate a total pre/post gain, pool with the older 0-8 rubric or infer a causal programme effect. Keep S13's first attempt separate from S14's supported revision; missing work is missing.

T12 / CLASSROOM STUDIO

Demonstrate a process. Keep the paper route complete.

An optional adult-operated demo is separate from the core exercise and requires local approval.

Before	During	After
Use a school-approved service under its current terms, account rules and privacy process. Use only fictional supplied material.	Teacher operates the tool. Show the brief and preserve the actual output before discussion. Do not submit student work or identifiers.	Report what actually happened. Recheck claims against the records and compare the result with the prepared exchange.
If approval or access is unavailable, use the prepared replies. No student account or live tool is required.	Ask students to predict a useful question or likely omission before viewing the response. Outputs vary; errors are not guaranteed.	Record which findings changed the next instruction. Return to the paper task and the learner's own final decision.

NEVER IMPLY THE EXAMPLE WAS PERSONALISED

The printed replies are authored simulations. A live demonstration may differ. Neither a fluent demonstration nor a clean second response proves reliability or replaces an independent check.

Adapt the time rather than compress the learning

Replace a prepared-reply comparison or plan an extra block. Preserve time for students' own thinking, independent checking and explanation. Do not crowd the demo into the independent transfer task.

T13 / CLASSROOM STUDIO

Take the routine to another real problem.

Use an adult-prepared, non-sensitive task with a small set of inspectable sources.

A reusable assignment

State the audience and a decision. Supply original records and a clear deliverable. Preserve a first view, report any help, conduct an independent check, question the proposal and explain a revision. Reuse the six-step cycle without requiring AI.

Keep locally	Share only if safe
Initial and revised work, source checks, help used, teacher feedback and accommodations.	Non-identifying material feedback or safe aggregate observations. Do not send student work, names or private reflections to Vizancia.
Record the route and timing actually used; additional coaching changes interpretation.	Questions or material feedback: info@vizancia.ca. Privacy: vizancia.com/privacy.html.

Educator reading

UNESCO, AI competency framework for students (2024): unesco.org/en/articles/ai-competency-framework-students. NIST AI 600-1, Generative AI Profile (2024): doi.org/10.6028/NIST.AI.600-1. Background reading, not endorsement or validation.

PUBLICATION AND CLASSROOM USE

Fictional learning cases and fixed AI-style replies. Classroom copying permitted for your own educational use; no resale or implied endorsement. Educator-review pilot, not field-tested or a validated assessment. The optional website projection follows this workflow with the same fictional evidence. Keep individual responses on paper.

T14 / CLASSROOM STUDIO

Teach the skill. Then choose how AI can help.

Learning principles and the human skills this exercise is designed to practise.

Skills students keep practising directly

Reading and understanding; problem framing; reasoning and calculation; asking useful questions; writing or explaining in their own words; judging evidence, values and consequences. Agreed access supports remain available.

Design principle	How it appears in the packet
Plan, monitor and evaluate	Students preserve a first view, set a bounded brief, check claims and explain their revision. Make this thinking visible and model the routine aloud. [1]
Worked models and own attempts	After the baseline, model the strategy with an unrelated example. Use T09-T10 after initial attempts; preserve S13 before revealing the new case key. [2]
Explain and question	Ask which detail supports a claim, why a limitation matters, and what would change a decision. Students provide their own explanation before feedback. [2]
Selective AI and human agency	Prepared AI help is inspected rather than obeyed. Students can choose a person, another tool or no AI, and remain responsible for the recommendation. [3]

Optional delayed practice

In a later lesson, ask students to explain one idea without an AI answer or the worked model visible, then reopen the records and correct it. Schedule a further revisit after a delay. This follow-up is additional to the four-period core. [2]

EVIDENCE-INFORMED DESIGN, NOT A VALIDATED PROGRAMME

These sources inform design choices; they do not endorse or establish the effectiveness of this packet.

S00 / STUDENT WORKSPACE

Start with your own view.

About eight minutes. Work individually with the support agreed with your teacher.

A FICTIONAL LUNCH-QUEUE PROPOSAL

A supplier says its AI lunch-queue sign halves waiting time for every school. On one Tuesday, one queue using the sign averaged 4 minutes; a different queue on Monday averaged 8. Menus and staffing differed. The trial did not measure how many students got lunch. An AI-style summary repeats the claim without naming a source.

WOULD YOU RECOMMEND USING THE SIGN NOW?

Use a case detail to explain your reasoning.

WHAT IS UNCERTAIN, AND WHAT WOULD YOU CHECK NEXT?

Use words, drawing or an oral response as agreed.

WHAT HELP WOULD YOU CHOOSE, AND WHY?

Your own work, a person, another tool, AI help or unsure are possible choices.

S01 / STUDENT WORKSPACE

Solve the problem. Keep the decision yours.

Your final product is a recommendation you can defend.

THE CHALLENGE

The Campus wants to conserve water while keeping its garden healthy. A supplier proposes an AI watering system. Should the Campus adopt it, run a limited test, choose a simpler option or wait? There is no deadline requiring a purchase today.

What to deliver	What to show
A recommendation	State the action, the evidence, a limit, a next check and a responsible role.
An AI contribution report	Show something AI added, a concern you investigated and what you accepted, changed or rejected.
A revision trail	Keep your first view, independent check, revised instruction and explanation of a final edit.

How this paper exercise works

Write your own thinking and brief first. Your teacher then supplies prepared replies. They are fixed examples, not responses generated from your wording. Your job is to question the help and decide what to do with it.

SUCCESS IS UNDERSTANDING YOU CAN EXPLAIN

You may use a person, another tool or no AI. More exchanges or more polished wording do not earn extra credit. Leave out private information.

S02 / STUDENT WORKSPACE

What do you think before receiving help?

Keep this page so you can explain what changed later.

01 / MY FIRST RECOMMENDATION

What would you do now, and why?

02 / A GOOD OUTCOME WOULD MEAN...

Consider the garden, the people affected and what must not be sacrificed.

03 / WHAT I KNOW, ASSUME AND NEED TO FIND OUT

Separate a fact from an assumption. Name one uncertainty.

THINK BEFORE OUTSOURCING

Which part of this problem do you need to understand yourself? Which part could help usefully support?

S03 / STUDENT WORKSPACE

Inspect the original records.

These records are fictional. Trace claims to what was actually observed.

A. GROUNDSKEEPER'S TEST LOG

Campus groundskeeper • fictional local record • 4 May

Two similar beds were observed for two days. The usual schedule used 20 litres; the new system used 10. Only water use was recorded. Plant health and longer-term weather were not measured.

B. SUPPLIER'S POSTER

Sprout Systems • fictional advertisement • 5 May

'Save half your water everywhere!' The poster repeats the Campus test. The supplier sells the system. It gives no additional tests or methods.

C. GROUNDSKEEPER'S CLARIFICATION

Campus groundskeeper • fictional interview note • 6 May

'The result is promising for these beds. I have not tested a heat wave, different plants or a whole growing season. I would not promise the same savings everywhere.'

S04 / STUDENT WORKSPACE

Direct the help without handing over judgment.

Write your own brief. The supplied reply later is a fixed example, not a personalised response.

01 / TASK, AUDIENCE AND MY CURRENT VIEW

What are we deciding, for whom, and what do I already think?

02 / WHAT HELP MAY DO - AND MUST NOT DO

Organise, explain, question, compare or review? What remains my responsibility?

03 / SOURCES, CONSTRAINTS AND OUTPUT

Name the allowed records. Ask for unknowns to be labelled and unsupported facts to be left out.

04 / HOW I WILL CHECK THE RESULT

Which claim or reasoning step will I check independently?

S05 / STUDENT WORKSPACE

Read the contribution before trusting it.

Authored simulations, not live AI. Compare both replies with your brief and the garden records.

A. REPLY TO 'MAKE THE SYSTEM SOUND EXCITING'

Authored simulation • not a live model or evidence

'The AI system guarantees a 50% saving in every garden. Its successful test proves it is ready for the whole school. Buy it now!'

B. REPLY TO 'SEPARATE OBSERVATIONS, LIMITS AND NEXT STEPS'

Authored simulation • not a live model or evidence

'The two-day test used 10 rather than 20 litres. We do not know the result in other conditions. Run a longer comparison and measure plant health. The system costs 30 credits.'

C. SOURCE CHECK

Campus evidence folder • fictional document inventory

The folder contains the two-day log, supplier poster and groundskeeper clarification. None gives a price. The 30-credit price in reply B cannot be verified from these documents.

S06 / STUDENT WORKSPACE

What did AI contribute? What deserves a question?

Use a short quote or an accurate summary. Do not call the reply an independent source.

01 / A USEFUL CONTRIBUTION

What did the reply help you notice, organise or explain?

02 / A STATEMENT I WOULD CHALLENGE

Quote or summarise the detail. What is your concern?

03 / A QUESTION THAT COULD CHANGE THE DECISION

Make it specific: which source, assumption, missing outcome or affected person matters?

04 / MY INDEPENDENT CHECKING PLAN

What will I calculate, inspect or ask a knowledgeable person?

S07 / STUDENT WORKSPACE

Check outside the reply.

Use the garden records and source inventory. A second AI answer alone is not a source check.

01 / THE CLAIM I CHECKED

Write the precise statement, not just the topic.

02 / WHAT I DID AND WHAT I FOUND

Name the record and exact detail, calculation or independent method.

03 / MY JUDGMENT

Supported, needs qualification, not established, or unresolved? Explain why.

04 / WHAT THIS CHANGES

Keep, qualify, remove or investigate? Connect the change to the decision.

S08 / STUDENT WORKSPACE

Consider people as well as performance.

Separate what people value, what they report and what still needs checking.

A. GROUNDSKEEPER'S PRIORITIES

Fictional role card • read aloud or discuss

'I want to conserve water and keep plants healthy. I can supervise a small trial. We need a manual stop and a clear rule for checking dry soil. A person must remain responsible.'

B. STUDENT GARDEN CLUB

Fictional role card • read aloud or discuss

'We want to keep learning how to care for the garden. The controls should work for everyone. We do not agree to upload our names or photos to test the watering system.'

C. SCHOOL PURCHASING LEAD

Fictional role card • read aloud or discuss

'No price has been confirmed. We need the real costs, approval and a comparison with a simpler timer. We can pause the proposal while gathering this information.'

S09 / STUDENT WORKSPACE

Return with better inputs.

Use what you found independently to improve the next request.

01 / THE FINDING THAT CHANGES MY INSTRUCTION

Name the evidence, constraint or missing perspective. Why does it matter?

02 / MY CHALLENGE QUESTION

What should the help reconsider or explain? Avoid asking only for confidence or more polish.

03 / MY REVISED BRIEF

State the new requirements, allowed sources, unknowns and kind of revision needed.

BEFORE YOU INSPECT THE PREPARED REVISION

Predict one improvement and one thing you will still need to judge for yourself. Your brief is practice; the next supplied reply is an authored example.

S10 / STUDENT WORKSPACE

Better does not mean finished.

This fixed revision uses the supplied findings. It is not a new source or a response to your own wording.

PREPARED AI-STYLE REVISION

The supplied two-day comparison recorded 10 rather than 20 litres. That supports describing this small test, not promising the same result everywhere. Plant health and other conditions were not measured; the price is not established by the records. Options include a supervised trial with approval, a simpler timer or waiting for better information. A trial proposal should address water use, plant health, access, privacy and a manual stop. The responsible people must agree the checks and review conditions before acting.

01 / WHAT IMPROVED, AND WHAT SUPPORTS THAT JUDGMENT?

Compare with the earlier reply and your revised requirements.

02 / WHAT WOULD I STILL QUESTION, EDIT OR REJECT?

Consider an option, a missing safeguard, an assumption or an unresolved fact.

03 / WHAT REMAINS A HUMAN DECISION?

Whose permission and responsibility matter? What can this reply not decide for us?

S11 / STUDENT WORKSPACE

Make the work yours.

A justified trial, simpler option or pause can all be defensible. Use extra paper or an oral explanation if needed.

01 / OUR RECOMMENDATION

State an action, a source detail, a limitation, a next check and a responsible role. Distinguish a proposed safeguard from an observed result.

02 / AI CONTRIBUTION AND MY CONSEQUENTIAL EDIT

What did you accept, change or reject? Name one specific change and the reason for it.

03 / REMAINING UNCERTAINTY AND RESPONSIBILITY

What could change your decision? Who must approve, check or stop the action?

S12 / STUDENT WORKSPACE

Use the routine in a different setting.

Read the new records, then complete S13 before feedback or worked answers.

A. TRIAL NOTE

Fictional library log • 12 June

Six volunteers sat at the display for two lunch breaks. They read twice as many pages as a different group the previous week. No comprehension questions were asked. Reading materials and noise levels differed.

B. AI-STYLE SUMMARY

Authored simulation • not independent evidence

'The trial confirms doubled comprehension for all students. Several websites agree.' The summary gives no website titles, links or new measurements.

C. LIBRARIAN'S NOTE

Fictional interview note • 13 June

'Pages read and understanding are different measures. We need a fair comparison and accessible options. Some students prefer a quiet corner without a display. We have not obtained a price or approval.'

S13 / STUDENT WORKSPACE

Solve the new problem with your own reasoning.

Work individually with agreed access support. Preserve this before discussion.

01 / MY INITIAL VIEW

What would you recommend about the display, and why?

02 / THE AI CONTRIBUTION AND MY INDEPENDENT CHECK

What does the summary say? What does a named original record establish? Explain a limit.

03 / MY RECOMMENDATION AND NEXT CHECK

Choose an action, explain the help you would use or decline, and keep a person responsible.

S14 / STUDENT WORKSPACE

Explain the improvement. Keep ownership of the answer.

Only use this page after the first response has been preserved.

01 / FEEDBACK, QUESTION OR NEW CHECK

What did you investigate after your first response? Note any help or substantive hint.

02 / MY REVISION - OR REASON FOR RETAINING MY VIEW

Connect your change or recheck to a source, a need or a reasoning gap.

03 / WHAT I CAN NOW EXPLAIN WITHOUT COPYING AI

What did I understand for myself? When would I use, limit or stop AI help?

TAKE THE ROUTINE WITH YOU

Think first. Direct the help. Report its contribution. Question and check. Iterate for a reason. Make the final decision yours.
